## 3Phase 4-Pole END FEED UNITS

End power feed units are designed to supply power at the termination point of the Track Busway system. Each factory-assembled unit integrates a durable steel junction box with a removable access panel, mechanically and electrically connected to a 12-inch (305 mm) section of Track Busway.

The assembly is furnished with appropriately sized connection lugs, a dedicated grounding lug, and insulating heat-shrink components suitable for conductors up to 300 MCM (150 mm<sup>2</sup>).

End power feed units are mechanically and electrically joined to adjacent Track Busway sections using the standard installation tool and joint hardware, which are ordered separately.
