L6-20R

NEMA L6-20R; 20A; 250V. Selected quantity: 1; Isolated ground. Female interface reference only, not a finished assembly. Source: Hubbell chart, p. V.

T225 2-pole outlet-box | phase selection update

Order number = listed base SKU + selected phase suffix. The phase is recorded with the order.

Connection and suffix choices

Phase assignment	Order suffix	Example full order SKU
L1 + L2	-L1L2	T225-C-10-OB-IGL620-G-L1L2
L2 + L3	-L2L3	T225-C-10-OB-IGL620-G-L2L3
L1 + L3	-L1L3	T225-C-10-OB-IGL620-G-L1L3

Selection guidance

The 208V L6-30R build connects two lines and equipment ground; it does not use neutral. The same outlet interface is selected once for an applicable 208Y/120V or 208V delta busway source. Confirm the system rating and tap compatibility for the actual source. An L14 receptacle has a neutral contact and remains a distinct configuration. L14-30R is a NEMA female interface; standard and isolated-ground devices exist. Choose grounding and physical mounting style for the complete factory tap-off. A NEMA R designation names the female interface, including a cord connector body. The OB or DCXX portion of the T225 base SKU identifies box or drop-cord style.

This page supplements the family guide. Device and complete-assembly ratings remain subject to the selected build and its marked unit; confirm feeder and phase loading.
