T40 wiring & connection details

2pole 240 | Match the rating on the individual cut sheet

Line-to-line output

Equipment ground: bonded fitting / enclosure -> output G. No neutral is connected to the L6 or 6-20 output.

Unbreakered outlet boxes omit the integral breaker and rely on properly rated upstream protection. The individual sheet identifies whether protection is integral.

208V and 240V are distinct supply arrangements. Use the assembly and output rating stated on the matching sheet.
